

LABELS AND ANNOTATIONS

/ > MATLAB Drive

▼ Files : 75g.m x untitled76g.m x untitled75g6g.m x untitledexp8i.m x untitled8ii.m x Figure 1

The screenshot shows the MATLAB IDE. On the left is the file explorer with a list of files including 'co2 at2.m', 'practical 1.m', 'practical_2.m', 'practical1.m', 'untitled2.m', 'untitled2exp', 'untitled3.m', and 'untitled3a5g'. Below this is the 'Workspace' pane showing two variables: 'angle' with a value of '[-60,-30,0,30,60]' and 'gain' with a value of '[9,12,15,12,9]'. The main area is the script editor, displaying a MATLAB script with 11 lines of code. The code initializes the environment, defines steering angles and array gain, and sets up a bar chart with labels and a title.

```
1 clc;
2 clear;
3 close all;
4 angle = [-60 -30 0 30 60]; % Steering Angles (degrees)
5 gain = [9 12 15 12 9]; % Array Gain (dB)
6 figure
7 bar(angle, gain)
8 grid on
9 xlabel('Steering Angle (Degrees)')
10 ylabel('Array Gain (dB)')
11 title('Array Gain for Different Steering Angles')
```

Files : untitledexp75g.m x untitled76g.m x untitled75g6g.m x untitledexp8i.m x Figure 1 x

```
1 clc;
2 clear;
3 close all;
4 angle = [-60 -30 0 30 60]; % Steering Angles (degrees)
5 gain = ones(size(angle)); % Normalized Gain
6 figure
7 polarplot(deg2rad(angle), gain, 'o-', 'LineWidth', 2)
8 title('Steering Angle Variation in MIMO Beamforming')
```

Name	Value
angle	[-60,-30,0,30,60]
gain	[1,1,1,1,1]
